Head, Division of Allergy and Infectious Diseases
University of Washington, Seattle

3rd Edition

©1994, 1998, 2002. University of Washington, Seattle, Washington, USA.

NOTICE: Management of infectious diseases is an evolving science. New developments from ongoing research, the emergence of new pathogens, and adjustments in government regulations present new and changing information for the practitioner that require changes in diagnosis and therapy. The authors and publisher have checked with sources believed to be reliable in their effort to ensure that drug selections and dosages set forth in this handbook are in accord with standards accepted at the time of publication. Nevertheless, the reader is urged to check the current product information sheet included in the package of each drug they plan to prescribe for any change in indications and dosage recommendations or in the contraindications for administration. This advice is particularly important with regard to new or infrequently employed drugs.
