WebDAV

Use WebDAV to set up drag and drop functionality between the portfolio and your desktop. You must set up WebDAV for each computer you intend to use with your ePortfolio. To set up WebDAV, follow these steps:

1. Click on the WebDAV button in the upper left hand corner of the Repository tool.
2. Copy the URL displayed on the page to use during the process.
3. Follow the directions to set up WebDAV for a PC or a Mac.
4. WebDAV will open a password-protected window (with your ePortfolio username and password) to allow you to drag and drop files, combinations of files, and/or folders to your Repository.
5. Your computer will ask you to name the link from your computer to your Portfolio for future use.
