**Assignments**

The Assignments tool allows CIG Coordinators to create, distribute, collect, and grade online assignments. Assignments are private; student submissions are not visible to other members of the CIG. The Assignments tool offers multiple grading options, including letter grades, points, check marks, pass/fail, or ungraded. Instructors can return assignments and allow for re-submission. This feature can be used to evaluate drafts of final projects or papers, or to allow students to correct and re-submit an assignment. When instructors release grades for an assignment, students can access instructor comments and their grades.
