Web Content

The Web Content tool allows CIG Coordinators to choose a website to display within the CIG. CIG Coordinators who want to provide many links to websites for the CIG may choose to list all of them in the Resources section, but only the most important ones with the Web Content tool. Departments, collaborations, or other groups may use the Web Content tool to provide a prominent link to their public worksite. If you want to display a website of your own choosing in your portfolio, you may do so by clicking on Options in the My Workspace Information section on the Home page of your My Workspace.
