Follow up email from Sevki Erdogan (UHH) regarding CS 101 (dated April 23, 2005)

Further to our discussions in the Articulation Meeting on April 15, I am forwarding a link that contains the required links for two modules of CS 101.   John and Judy Gersting, Ted Shaneyfelt and mostly Barbara Meguro are responsible for the contents. Many thousands of hours have been spent in the making. I started teaching 101 for the first time this year and as a new user of this exceptional environment, I was really impressed.

Barbara has spent around 8 hours putting the one page link for your convenience. You have also been given a WebCT account that will allow you to see the postings of one of our current class. Please note that not all assignments and home works are visible (there is a sophisticated mechanism that makes these components available on a timely basis).

Please take the time and let us know how you feel about this content. If you are not directly responsible from the 101, you may want to check the content but also pass to those currently teaching 101. I hope you are as excited as I was when I have seen this content. Please remember there is a very dedicated and capable person (Barbara) who makes it all possible. There is TA support for the marking of the assignments, but there is also quality assurance. We also have tutoring available (please check the WebCT for the detail).

Well, I could tell you more about it all, but the best would be to try out the quizzes, assignments, AVIs and check out the feedback on the assignments.

http://cs.uhh.hawaii.edu/cs/courses/cs101/statewide/CS101_Components.htm

(Note: As an example, go to the Extra Practice under the Access module, Select Queries and modify the English spec to an acceptable form, then gothe the Form view and do a self scoring!!)

Thank you for your time and interest.

Sevki
