Re: Testimony in opposition of the Thirty Meter Telescope

(Transcribed verbal testimony) I am here today to just be around our people and support the cause of the Mauna. It’s not that I don’t support the whole exploration of space, the exploration of science and astronomy, that’s not it for me. Basically, enough is enough. Of course our Mauna is sacred, but there are 13 telescopes there already.

Enough is enough already. It’s time for our people to get together. It’s so awesome to see just everyone non-native and native alike, to come together. It’s a black and white subject, you are either for or against it.

It’s a great sense of mana to see our people come together to support each other and empower each other in a positive manor. To kūʻē in a positive way, to change others perspective in a non-forceful and non violent kind of way. It’s awesome to be a part of.

Mahalo.
