Chair Takamine, Vice Chair Kawakami, and Members of the Committee:

I am pleased to contribute the expertise of the College of Tropical Agriculture and  
Human Resources (CTAHR) to provide input to the decision-making process on House  
Bill 2763 HD 1, which appropriates funds to control or eradicate priority invasive  
species, including the coqui frog.

I support HB2763 HD1. Invasive species threaten Hawai‘i’s unique plants and animals.  
Many invasive pests also hurt agricultural operations by damaging crops, lowering crop  
yields, or spreading diseases. Limiting the spread of invasive species is crucial to  
protecting Hawai‘i’s environment and farmers.

In Hawai‘i, the coqui frog has no predators and reaches population densities three to four  
times greater than in its native Puerto Rico. It eats insects and spiders, putting native and  
endemic prey species at risk. It competes with native birds for food. The male’s loud,  
shrill mating call disrupts human activities, especially sleep. The coqui frog also  
adversely impacts our nursery industry. Because the transportation of potted plants can  
spread the frogs to new locations, plants must be disinfested before they can be shipped,  
which is an added cost to the industry. Controlling established coqui frog populations and  
eradicating smaller populations before they get too large will benefit our environment,  
communities, and businesses.

For these reasons, I support HB2763 HD1.

Thank you for the opportunity to testify.
