Excerpts taken from the World Health Organization (WHO)
July 5, 2003 Press Release

"The world is not yet SARS-free."

"We do not mark the end of SARS today, but we observe a milestone:
the global SARS outbreak has been contained."

"SARS continues to threaten the world."

"SARS could be a seasonal disease and return later in the year."

"This is not the time to relax our vigilance. The world must remain
on high alert for cases of SARS."
