

# UNIVERSITY OF HAWAII SYSTEM

## Legislative Testimony

---

Testimony Presented Before the  
House Committee on Finance  
Wednesday, March 27, 2019 at 2:30 p.m., Room 308

by  
Marcia Sakai  
Interim Chancellor  
and  
Carolyn Ma, Pharm D, BCOP  
Dean  
Daniel K. Inouye College of Pharmacy  
University of Hawai'i at Hilo

### SB 25 SD2 HD1 – RELATING TO INSURANCE

Chair Luke, Vice Chair Cullen, and members of the committee:

My name is Carolyn Ma, and I am the Dean for the UH Hilo Daniel K. Inouye College of Pharmacy (DKICP). The University of Hawai'i fully supports this bill as it relates to the clauses that include reimbursement to health care providers who perform services under their scope of practice.

The DKICP graduates highly trained professionals with the terminal degree of Doctor of Pharmacy. The four-year professional curriculum includes didactic integrated sciences, therapeutics and disease, treatment and management, communication, and interprofessional education. More than 30% of the curriculum is held in experiential clinical rotations at sites for hospital acute care medicine, acute care ambulatory care clinics, retail community pharmacies, pharmacy specialty clinics, and a variety of medicine and public health areas.

Due to the complexities of today's patient care, pharmacists have become indispensable primary care extenders for physicians and advanced practice nurse practitioners. Common medication therapy problems include inadequate therapy (56.86%), Non-adherence (14.89%), Adverse Reaction (14.7%), Too High of a Dose (6.83%), and Unnecessary Therapy (6.68%).<sup>1</sup> Pharmacist expertise in Medication Therapy Management (MTM) encompasses intervention in all of the aforementioned areas, as well as skill in managing new medication regimes, monitoring and adjusting medications especially in the chronic diseases of diabetes, cardiovascular disease, anticoagulation and other diseases.<sup>2,3,4</sup> A multitude of research studies and published articles detail the value of a clinical pharmacist on a care team. In 2010, Chisolm et al,

provided a comprehensive literature review (298 studies) that describe positive results of pharmacist interventions in a number of areas such as lowered cholesterol, diabetes markers (hgbA1c), blood pressure and adverse drug events.<sup>5</sup> Results also support the fact that pharmacists improve patient education, help with medication adherence and improve measures of better general health.<sup>5</sup>

Clinical pharmacists, especially in the ambulatory care, specialty care and acute care settings, provide direct patient care through collaborative practice agreements with physicians and nurse under either general or direct supervision. Almost all health care professions have the ability to bill for provided services for third party insurers and Medicare fee structures. Pharmacists do not have reimbursement privileges. Very limited billing and reimbursement can be made under “incident-to billing”, which is inadequate in terms of reimbursing for cost, time or expertise. This lack of insurance coverage severely limits primary care providers from affording the expertise and skill of a clinical pharmacist.

This bill will allow for coverage of activities that the clinical pharmacist provides and will help health care organizations, clinics and areas to improve patient care and health outcomes. Pharmacists are also the most accessible health care professional and can help to bridge the primary care provider shortage in this state.

Thank you for the opportunity to submit testimony.
