SB 1474 -- RELATING TO THE MAUNA KEA SCIENCE RESERVE AUTHORITY

Testimony Presented Before the  
House Committee on Water, Land & Ocean Resources

March 14, 2005

By

James Gaines  
Interim Vice President for Research  
University of Hawaii System

SB 1474 – Relating to the Mauna Kea Science Reserve Authority

Chair Kanoho, Vice Chair Schatz, and members of the committee:

Thank you for this opportunity to comment. The University remains concerned about the intent and potential impact of SB 1474, and offers the following testimony.

Since the state auditor's management audit of the Mauna Kea Science Reserve was issued in 1998, the University continues to work purposefully, diligently, and successfully to ensure the recommendations were followed, implemented, and adhered to, including:

- Development of a completely new internal University guiding document, the Mauna Kea Master Plan, approved by the UH Board of Regents in June 2000. This plan was developed over a period of 2 years, by a community-based advisory committee, and chaired by two faculty members at UH Hilo's College of Hawaiian Language, Dr. Pila Wilson and Mr. Larry Kimura.
- Establishment of the Office of Mauna Kea Management, based at the University of Hawaii at Hilo, and the establishment of two important, community-based advisory bodies: the Mauna Kea Management Board, and Kahu Ku Mauna, the Office and Board's cultural advisory council.
- Establishment of the Mauna Kea Ranger corps, hired and led by OMKM to serve as the University's eyes and ears, provide public health and safety information to visitors, resource protection and oversight, and a visible day-to-day presence;
- SB 904 will give the University the authority to promulgate administrative rules governing public use of University held lands, including Mauna Kea.

- In January, the Board of Regents approved acceptance of commercial activity permitting responsibilities from the DLNR, and authorized OMKM to manage this function

In summary, the University has put mechanisms in place to ensure community input, review, advice, and consultation on ALL aspects of management and future development are addressed. The creation of a separate management authority would potentially undo all of the work done to date to create a far better stewardship situation for Mauna Kea than in place previous to the Master Plan and the creation of OMKM.

The public dissatisfaction cited in this bill has largely been focused on the proposed NASA/Keck Outrigger Telescopes project. These issues – from the federal EIS to the state Board of Land and Natural Resource’s contested case hearing – are processes that fall outside of the University’s jurisdiction and control. Additionally, this dissatisfaction has been expressed primarily by those actively engaged in these processes, and efforts to halt new development. Again, DLNR’s permitting processes, and the University’s active, day-to-day management and stewardship responsibilities are very separate functions.

If a review of the University processes and Master Plan is desired, we believe that those who have been most directly involved in Mauna Kea issues over the past four years are already well aware of what’s working and what’s not. The University believes it would make sense to bring these parties to the table to engage in a joint effort to make recommendations back to this body. The University would willingly participate in a legislatively mandated task force – including broadly based interests – rather than the auditor, to study the management issues raised by this bill and develop recommendations.

Thank you for your consideration.
