The Next-(Next)-Generation Sequencing: Empowering a New Era of Biology

High-throughput sequencing is rapidly expanding beyond the confines of large research centers to become a mainstream tool for biological research. To put this rapidly evolving technology in perspective, popular second- and third-generation sequencing technologies will be explored by describing two high-throughput applications in infectious disease research: pathogen sequencing and characterization of the immune system.

Mahdi Belcaid, Ph.D.

Assistant Researcher

Hawaii Institute of Marine Biology

School of Ocean and Earth Science and Technology

University of Hawaii at Manoa

Wednesday, December 10, 2014 at 12:00 noon
John A. Burns School of Medicine, Kaka'ako
Medical Education Building Auditorium (Room 315)
For further information, contact (808) 692-1654

The Center and its activities are supported by a grant (P20GM103516) from the National Institute of General Medical Sciences, National Institutes of Health.
