As security breaches are getting more sophisticated and frequent, businesses must prepare for the possibility of a cyber attack. The goal is to provide attendees with the opportunity to explore practical tools and techniques that can help them assess, enhance and maintain the security of their business information systems:

- Cybersecurity basics, tips and ideas to start improving their cybersecurity
- Create a customizable cybersecurity plan to include policies and employees' readiness to reduce the risks from most frequent cyber threats
- Establish a simple and practical cyber incident response plan

Organizers have kept the fee affordable so that small businesses can benefit from this important workshop.
